

The Fazua App

COMODULE and Fazua teamed up and developed an app for all users of eBikes with the Fazua evation drive system. OEM customers can furthermore benefit from their own app and cloud access for their Fazua-equipped bikes.

Nowadays, most sport-orientated bike riders want to track their data. By using the FAZUA app which is compatible with all eBikes equipped with the Fazua evation drive system, you can get access to A LOT more data from now on. Data that will help you learn more about your training and your bike.

The app includes the following features:

- GPS navigation and tracking
- Speedometer
- Technical overview, state of battery
- Support, direct access to Fazua Service
- Interact, share your rides with friends
- Summary, analyze the collected data after your ride in detail

“The idea behind the Fazua app was to display all data the Fazua evation drive system is measuring of the rider. By doing so the app allows complete transparency about data of the rider and the system at the same time combined with accurate GPS tracking which allows riders to analyze their training as precisely as possible.”, explains Fazua Head Developer Pablo Diez.

All bikes equipped with a remote from model year 2019 are compatible with the app. Serials starting from **1805113000** are matching. If the bike is not compatible yet, please head to a local Fazua Service Partner and ask for the dedicated Remote Exchange Program.
